Fourth-year Mechanical Engineering and Economics double major at Koç University. Combining hands-on experience in production, process engineering, and R&D testing with quantitative economic analysis. Seeking engineering roles in manufacturing, process improvement, or product development and quality to apply root-cause analysis, data-driven decision-making, and automation expertise.

Education

Erasmus Exchange Program, University of Mannheim — **Mannheim, Germany**
Exchange semester with a focus on economics and finance coursework, gaining international academic exposure and cross-cultural experience — 2026

Mechanical Engineering, Koç University — **Sarıyer, İstanbul**
GPA 3.27/4 – Full Scholarship — 2022-

Economics, Double Major, Koç University — **Sarıyer, İstanbul**
GPA 3.27/4 – Full Scholarship — 2024-

Necmettin Erbakan Arifiye Science Highschool — **Arifiye, Sakarya**
2018-2022

Experience

Slip Ring R&D Design Intern, — **Gölbaşı, Ankara**
ASELSAN Elektronik Sanayi ve Ticaret A.Ş. — August-September 2026
Performed ISO 21940-11 rotor balancing tolerance analysis for a helicopter anti-icing slip ring rotor and transmitted vibration criteria to define a 28.1 g·mm residual unbalance target. Built an 8-item unbalance error budget showing that tightening manufacturing tolerances improves the result by only 3%, with cable routing as the dominant contributor; proposed a zero-cost symmetric cable distribution reducing that contribution from 45 to 4 g·mm

Production & Process Engineer Intern, — **Dilovası, İzmit**
Repkon Manufacturing — Sep 2025
Initiated a Python-based automation project designed to streamline production workflow and data tracking, replacing manual spreadsheet interactions with an automated pipeline framework. Assisted in production planning by collaborating with process engineers to design tooling strategies, draft technical drawings and optimize production routes.

- Solidworks
- Python
- Production Routes

Reverse Engineering a Gasoline Generator, — Oct 2024 – May 2025
Mechanical Engineering Design Class
Conducted mechanical design, assembly, finite element analysis, and motion simulation of a gasoline generator using Siemens NX, ensuring structural integrity and functional performance.

- Motion Analysis
- Simens NX
- Ansys

Additional information

Languages Turkish (native), English (advanced), German (elementary), TOEFL: 98

Achievements Anatolian Scholarship (2022)

Prof qualifications Siemens NX; Python; Ansys; SolidWorks; Excel; Esprit CAM

Interests Product Development; Playing Bağlama; Strategic Itinerary Planning
